

CARDPOINTE VIRTUAL TERMINAL

Bringing the Power of Payment Acceptance to Your Computer.

How It Works

Accept payments anytime, anywhere with the CardPointe Virtual Terminal – an easy-to-use browser-based app for processing payments. In just seconds, accept an order over the phone or swipe/dip a customer's card on an integrated, lightweight USB reader.

With the CardPointe Virtual Terminal, every transaction is protected by CardSecure®, our patented tokenization method for securing cardholder data. CardSecure safeguards your business and customers from data breaches by storing *and* encrypting all card data in our hosted vault. This removes sensitive information from your system, and replaces it with irreversible tokens.

INTERCHANGE OPTIMIZATION

The Virtual Terminal processes Level II and Level III data so every transaction qualifies for the lowest interchange rate possible, reducing the cost of each payment processed.

CUSTOM RECEIPTS

Promote a special event or your social media account on your receipts, which can be printed or emailed to your customer. You can also customize customer profiles and transaction fields.

REAL-TIME REPORTING

The Virtual Terminal is directly integrated to the CardPointe platform, providing real-time access to robust, comprehensive reports on authorizations, settlements and funding activity.

TRANSACTION TYPES

Sell | Verify | Void | Force Credit | Refund
